

Forestland Development Workshop

You are invited to attend a free workshop and discussion on planning, designing, developing, and managing subdivisions to sustain the surrounding forestland.

Tuesday, June 7, 2005 from 9 am - 1 pm

*Montgomery County Government Center
755 Roanoke Street in Christiansburg
Multi-Purpose Room 1 (First Floor)*

There should be plenty of parking near the building.

The goal of this workshop is to gather information from professionals involved in land planning, forest management, land conservation, and residential design/development - on the challenges and possible solutions to creating residential communities in or near mountainous forestlands in ways that support economic and ecological objectives.

We are especially interested in identifying social, political, and economic issues that are obstacles to clustered development *and* to managing timber and other resources on intact forestlands near residential subdivisions.

Please join us to share your experience and ideas on Tuesday morning, June 7th.

RSVP before noon on June 6th to lskab@vt.edu or 231-6863 - to assist us in making final workshop arrangements. Thank you.
